Interior metal ceiling blade ceiling panels

ARIES IMEX offers interior metal ceiling blade ceiling panels in many big projects. They combine functions and aesthetics, and can be customized.

The blade ceiling is one of the open type ceiling series and is composed of high quality aluminium alloy with double side polyester powder coating. Blade ceiling combines a crisp, linear appearance with a pleasing open, floating effect. Ideal for large areas such as shopping malls, schools, banks, airports and railway stations. The firm suspension system is fixed as necessary with a stud and boom arrangement. The surface of the blade ceiling strip ceiling is coated with polyester powder coating. Various blade depths and flexibility in spacing between blades can be utilized depending on the required design. Standard nominal sizes are 80mm, 110mm and 150mm.

Aluminum ceiling features:

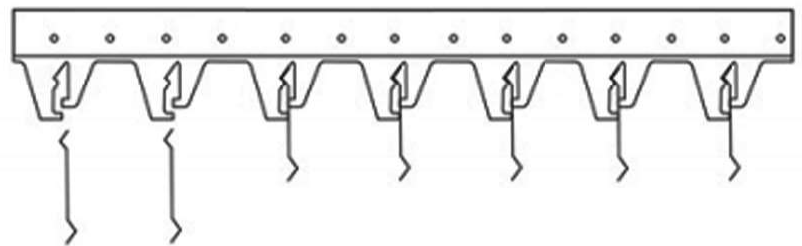

Adapt to various environments, moisture, wind, corrosion and so on. Aluminum ceiling is light in weight, high in hardness, durable and long in use. Construction installation is easy to disassemble, easy to repair and easy to clean. Long-lasting color and resistance to deformation, product environmental protection can be recycled, it is a green environmentally friendly material. Aluminum ceilings are rich in style and color and can be customized. Suitable for all occasions. Welcome to send an email to us for more details , we are keen to wait for your consultation.

- Shape: Rectangle
